

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

yet are far from pronouncing any thing positively against it, so that they do not discourage any that have conveniences, from trying.

But whether the way there mentioned will succeed, or not, according to expectation: Sure it is that a Stone-cutter in *Oxford*, Mr. Bird, hath many years since found out a way of doing the same thing, in effect, that is here mentioned; and hath practised it for many years. That is, he is able so to apply a colour to the outside of polished Marble, as that it shall sink a considerable depth into the body of the stone; and there represent like figures or images as those are on the outside; (deeper or shallower according as he continues the application, a longer, or lesser while.) Of which kind there be divers pieces to be seen in *Oxford*, *London*, and elsewhere. And some of them being shewed to his Majesty, soon after his happy restauration, they were broken in his presence, and found to answer expectation. And others may be dayly seen, by any who is curious, or desirous to see it.

*An Intimation of a Way, found in Europe to make China-dishes.*

Notice was lately given by an inquisitive *Parisian* to a friend of his in *London*, that by an Acquaintance he had been informed, that Signor *Septalio*, a Canon in *Millan*, had the Secret of making as good *Porcelane* as is made in *China* it self, and transparent; adding that he had seen him make some.

This as it deserves, so it will be further inquired after, if God permit.

*An Account of an odd Spring in Westphalia, together with an Information touching Salt-Springs and the straining of salt-water.*

An observing Gentleman did lately write out of *Germany*, that in *Westphalia* in the Diocess of *Paderborn*, is a Spring, which looses it self twice in 24 houres; coming always after 6 houres, back again with a great noise, and so forcibly, as

to drive 3 Mills not far from its source. The Inhabitants call it the *Bolderborn*, as if you should say, the *Boysterous Spring*.

The same Person, having mentioned the many *Salt-Springs* in *Germany*, as those at *Lunenburg*, at *Hall* in *Saxony*, at *Saltzwedel* in *Brandenburger Mark*, in *Tyrol*, &c. observes, that no *Salt-water*, which contains any *Metal* with it, can well be sodden to *Salt* in a *Vessel* of the same *Metal*, which it self contains, except *Vitriol* in *Copper Vessels*.

He adds, that, to separate *Salt* from *Salt-water*, without *Fire*, if you take a *Vessel* of *Wax*, hollow within, and every where tight; and plunge it into the *Sea*, or into other *Salt-water*, there will be made such a separation, that the vessel shall be full of sweet water, the *Salt* staying behind: but, though this water have no saltish taste, yet, he saith, there will be found a *Salt* in the *Essay*, which is the *Spirit of Salt*, subtil enough with the water to penetrate the *Wax*.

*An Account of the Rise and Attempts, of a Way to  
conveigh Liquors immediately into the Mass of  
Blood.*

Whereas there have lately appeared in publick some *Books*, printed beyond the Seas, treating of the Way of *Injeſting liquors into Veines*; in which *Books* the *Original* of that *Invention* seems to be adſcribed to others, beſides him, to whom it really belongs; It will ſurely not be thought amiſs, if ſomething be ſaid, whereby the true *Inventor's* right may beyond exception be aſſerted & preſerved; To which end, there will need no more, than barely to represent the *Time* when, and the *Place* where, & among whom it was firſt ſtarted and put to tryal. To joyn all theſe circumſtances together, 'Tis notorious, that at leaſt ſix years ſince ( a good while before it was heard off, that any one did pretend to have ſo much as thought of it ) the Learned and Ingenious *Dr. Chriſtopher Wren* did propoſe in the *Univerſity of Oxford* ( where he now is the Worthy *Savilian* Profeſſor of *Aſtronomy*, and where very many Curious Perſons are ready to at-
